

Principal-reseller for certified medical devices and deep-tech components.

Asaptic operates a sourcing and compliance pipeline for regulated clinical devices, photonics, and industrial deep-tech components. The pipeline is approximately 99% AI-operated for intake, qualification, evidence assembly, and document drafting, with human review on every outgoing commercial or compliance commitment.

Asaptic is affiliated with established Asia-Pacific clinical-nutrition operations.

CORE CAPABILITIES

Clinical Device Sourcing • Health Canada Class II MDALL and TGA Class IIa ARTG certified factory pathways. • Bioimpedance/BIA and body-composition analyzer sourcing. • Canada and Australia hospital, aged-care, and distributor procurement support.	Photonics • TFLN wafers and electro-optic modulators. • Direct foundry access with qualification evidence review. • Five-business-day sample availability for selected SKUs.	Industrial Deep-Tech Components • Power, sensing, robotics, RF, and specialist component channels. • Supplier identity, export-control, and certification pre-screening. • Commercial document packs for buyer review and internal approval.
---	---	---

PROCESS SUMMARY

1 Intake Capture product, quantity, destination, end use, and certification needs.	2 Screen Run supplier identity, sanctions, export-control, and certificate checks.	3 Source Shortlist qualified factories or foundries and confirm availability.	4 Validate Assemble documents, samples, pricing basis, and risk notes.	5 Issue Human-reviewed PI, term sheet, and shipment document package.
